

**August 30, 2007****SPECIFICATION****NIKKOL BL-4.2****INGREDIENT NAME : POE(4.2) Laurylether**

|                            |                                                                                                     |
|----------------------------|-----------------------------------------------------------------------------------------------------|
| <b>Appearance (25 C)</b>   | <b>: White to pale yellow liquid, petrolatum-like or waxy substance with a characteristic odor.</b> |
| <b>Identification</b>      | <b>: PASS</b>                                                                                       |
| <b>Acid value</b>          | <b>: 1 max. (Method 1, 5g)</b>                                                                      |
| <b>Hydroxyl value</b>      | <b>: 135 – 165</b>                                                                                  |
| <b>pH (5%aq.)</b>          | <b>: 4 – 7</b>                                                                                      |
| <b>Purity (1)</b>          | <b>Heavy metals - 20 ppm max.</b>                                                                   |
| <b>Purity (2)</b>          | <b>Arsenic - 2 ppm max.</b>                                                                         |
| <b>Purity (3)</b>          | <b>Color - 80 max. (APHA)</b>                                                                       |
| <b>Residue on ignition</b> | <b>: 0.2 % max. (Method 3, 3g)</b>                                                                  |

Remark: This product complies with JSQI (Japanes Standards of Quasi-drug Ingredients).
